

GOYETTE MECHANICAL FOCUS ON SAFETY

AUGUST 2018 EDITION

WORKING IN HEAT IS A MAJOR SAFETY CONCERN – **Hydration and work breaks are critical**

Ladders continue to be one of the most dangerous pieces of equipment on construction sites. On average 80 workers die each year as a result of falls from ladders. Lifts, scaffolds and platform ladders continue to be a safer choice. Below are pics of the CAGE platform ladders that are available from our warehouse.

SAFETY MILESTONE

Recently Goyette Mechanical surpassed 300 days and over 500,000 hours worked without a lost time injury! In addition to passing 180 days without an injury.

Thanks to all you for following through with our safe work initiatives.

If you do not see a safe way to perform your work, STOP and ask your supervisor.

Tom Goyette, Corporate Safety Director, has received his Associate Safety Professional Certification from the Board of Certified Safety Professionals. The ASP certification is the second highest awarded by the international construction and manufacturing safety society.

Remember your safe driving tips:

-Your **only** job when you are driving is to safely operate your vehicle

-Slow down and keep your cool in traffic. Rushing only leads to problems.

-Being a Safe, Courteous Driver leads to more work. *That person you cut off or politely let in may need a Mechanical Contractor tomorrow.*

“Working safely may get old, but so do the people who practice it”

-Unknown
