# Building in Tension

A lecture by inventor Sam Lanahan

Sunday October 13<sup>th</sup> 3:30pm–5:00pm

Stone Soup 306 NW Broadway

*Followed by reception with wine bar & cognac tasting*

## Explorations in Dynamic Equilibrium

Against the evolutionary backdrop of applying geometry to achieve optimal structural solutions, the C6XTY lattice becomes one milestone in a natural progression. We can now build in tension—‘no more stone piling.’ The components are easy to mass produce and the resulting structure is economical in the use of materials with defined characteristics of stiffness, scale, etc. For architects, sculptors and visionaries this is an epic paradigm shift for creating holistic habitats and yet unimagined forms woven from structural fabrics.
