

SCIENCE UPDATE: How can you stay up-to-date and help your student?

Dear Families,

Welcome back and I look forward to a great year in science. The Science Center at PS 199 is a combination Science Classroom and Hydroponic Greenhouse. I teach a hybrid curriculum with the core being the NYCDOE's Amplify Science Curriculum and bringing in hands-on experiences in the greenhouse that extend our learning while infusing technology across the curriculum.

Science is a rigorous course and while I want every student to LOVE science, it is hard work, perseverance, active participation, and a willingness to take risks and be wrong that will propel your student to the top. Our curriculum meets the New York State Science Learning Standards, NYCDOE's Scope and Sequence and is based on NGSS and its innovations.

There is a wealth of information on the PTA's Website and even more on my Shutterfly Site. I highly recommend joining my Shutterfly site as I will post copies of homework, pictures of our work, opportunities for students, and more. This is where the animal sign up is as well. You can request membership by sending me your email or at
