

# BESPOKE, DATA & INSIGHTS

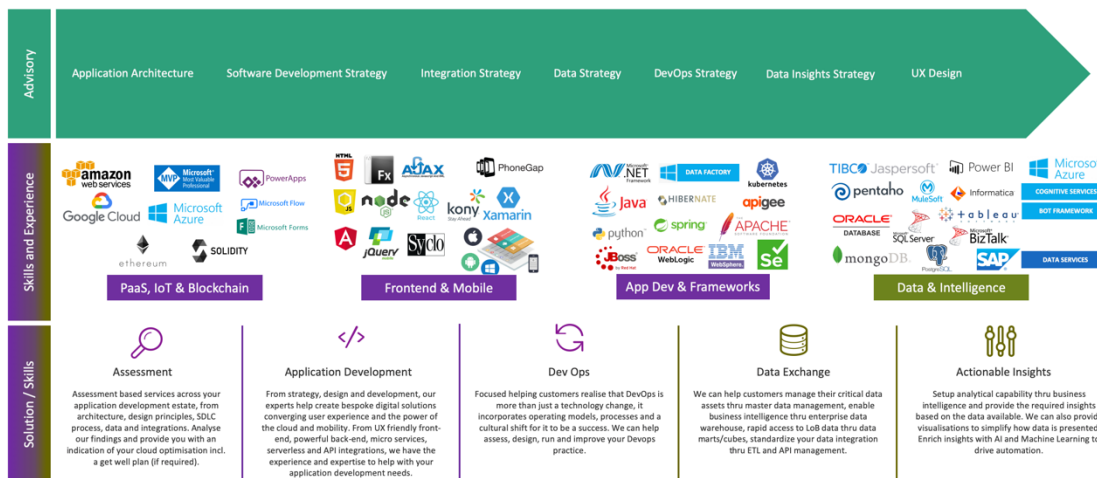

Applications must be as unique as the businesses that demand them, and bespoke solutions can ensure a tailored fit to custom requirements. Capturing information is not enough; an enterprise cannot excel without unlocking the actionable insights hidden within their data.

## Questions we help answer

“  
*Is bespoke the right solution for us? Our application doesn't meet our needs anymore, can you help? Are we going to benefit from DevOps?*  
*Do we know where our data resides? How do we better manage and secure our data assets? How do we make sense of our data and provide actionable insights?*  
 ”

## WHAT WE DO?

At Transfit, we design, build and implement bespoke solutions that solve unique business needs that enable competitive advantage. We also help businesses delve deeper into your sources of data to discover patterns and trends that can drive more informed business decisions on actions such as customer behaviour and usage trends.

## Problems we fix

With bespoke solutions including data and insights we help fix the following problems:

- Legacy bespoke applications that don't meet your digital strategy;
- DevOps focused only on process and technology;
- Siloed, disconnected or duplicated data;
- Data quality issues;
- Untapped hidden insights within data;
