## PROJECT DESCRIPTION

Wuhan, the capital of central China, is currently developing at breakneck speed. This project is part of the ever-growing Rail Network that is taking place all along the Chinese East Coast. Wuhan Rail Station is 258,300 square feet and is a gateway into the city, used by hundreds of thousands of passengers each day, traveling in from the surrounding provinces on fast, modern trains. Acutherm Therma-Fusers™ are utilized throughout the “Station Square” which is part of the commercial hub for the station.
