

Principal Geotechnical Engineer

Mining One Consultants are seeking a Principal Geotechnical Engineer (Underground) with 15+ years of experience in the mining industry for their Melbourne office.

The successful applicant will specialise in underground geotechnical engineering for mining clients. They will also be required to manage and mentor a team of geotechnical engineers.

Typical duties and responsibilities will include but not be limited to:

- Overseeing the technical and administrative performance of the underground geotechnical group
- Provide technical direction and mentoring to the underground geotechnical group
- Complete technical work for clients on operational and project tasks
- Develop and maintain client relationships at all levels
- Find and develop new business opportunities
- Marketing and promotion of Mining One services
- Working closely with Mining One's senior business leaders to ensure the continued success of the group

To be considered for this role you must have a Degree in Engineering (geological/civil/mining) preferred and/or geological sciences with post graduate engineering qualification. **RPEQ certification is necessary.**

Other essential qualities include:

- Sound computer skills
- Exceptional communication and people skills
- A supportive and team focused outlook

Mining One aims to provide an interactive and social work environment and promote a work life balance.
