

# Salt Wall Systems Hanging Wall Snap Fit Design

## **Hanging Wall Panel for Existing Wall Structure**

*The following example is for a 10 panel (W 80" x H 36" or W 203cm x H 91.5 cm) salt wall.*

### **1. Prepare Wood Mounting Platform**

*Individual salt panels weigh 22lbs [10 kg] which require a strong mounting platform. Most existing wall structures include drywall, CMU or brick. Unless the mounting surface is a minimum of ¾" [1.9 cm] wood, a Wood Mounting Platform for the panels is required.*

Cut plywood (min ¾" [1.9 cm] thickness) one inch bigger than the dimensions of the size of the planed salt wall. For example: if salt wall dimension is W 80 x H 36, cut mounting board W 81 x H 37. (particle board not acceptable mounting surface).

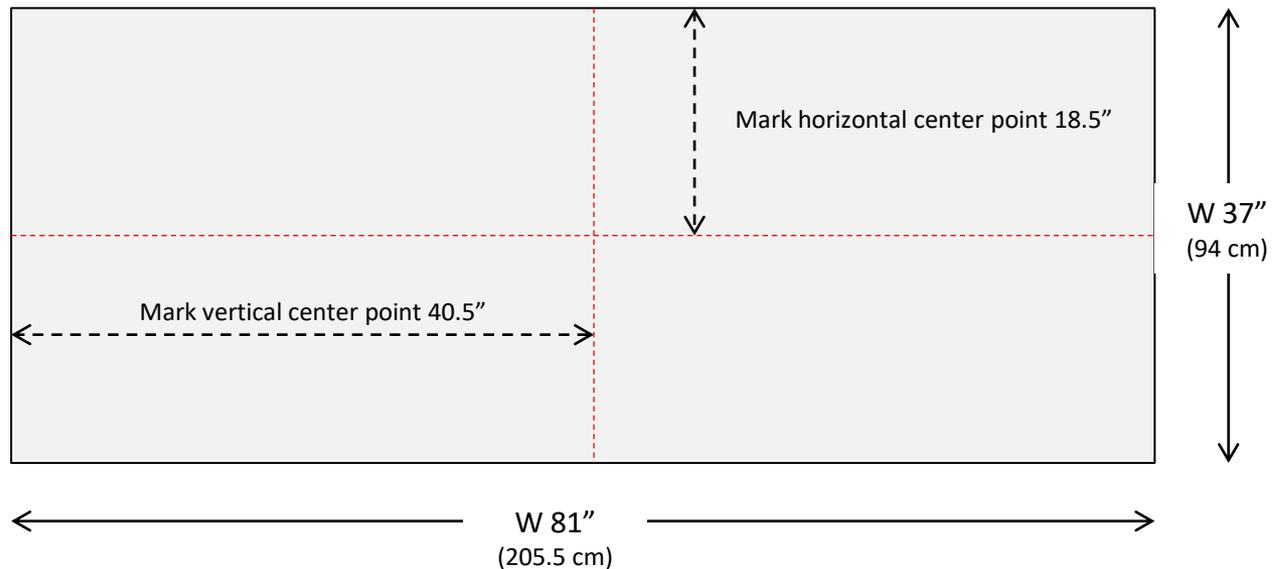

### **2.. Install Wood Mounting System**

Salt walls can be installed at any elevation or angle. Once the location is determined, the mounting board must be anchored into structural wall components (e.g. framing or rock wall).

### 3. Mark Centerline

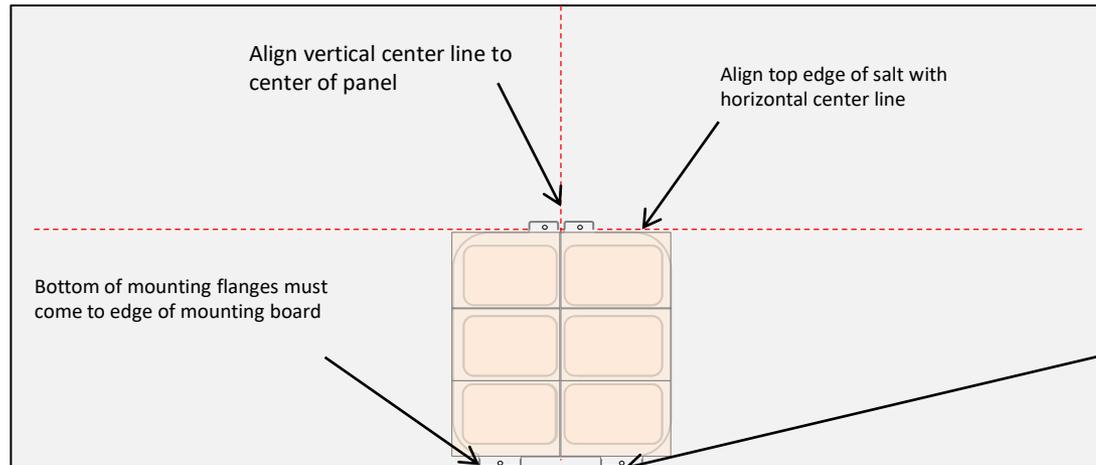

Once mounting board is anchored the center-lines must be distinguished.  
Strike both horizontal and vertical center-lines.

Example for 10 panel wall W 80" x H 36".  
Mounting Panel measures W 81 x H 37"

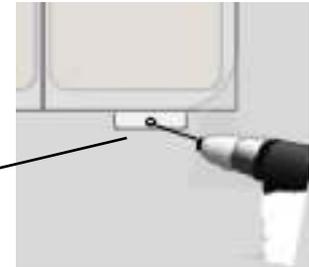

## 4. Install the Anchor Panels

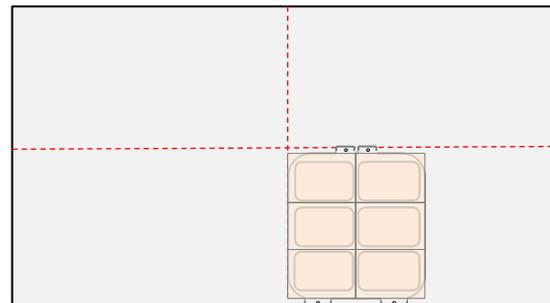

The first panel installed in a salt wall is the most important, it's called the bottom anchor panel. The bottom anchor panel needs to be the center panel of the bottom row. If the bottom row contains an even number of panels, the anchor panel needs to be the center right panel.

**Note:**  
 Use driver to mount supplied stainless panel screws

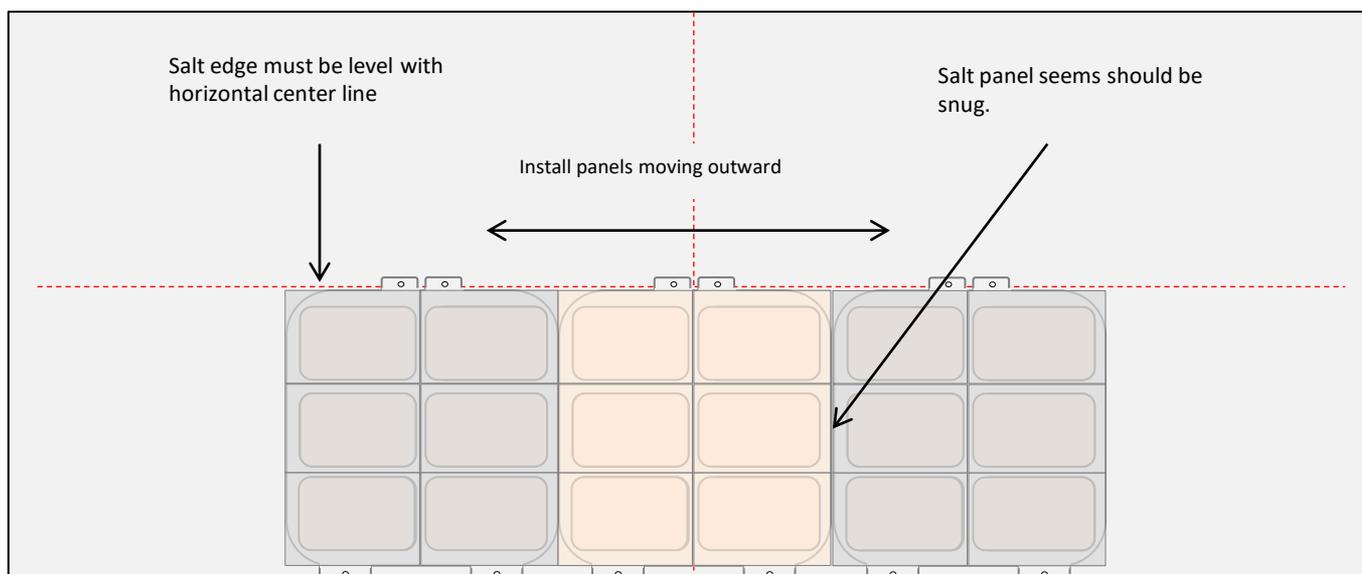

**Note:**  
 If row consists of even number of panels, begin with the center right panel as the anchor panel.

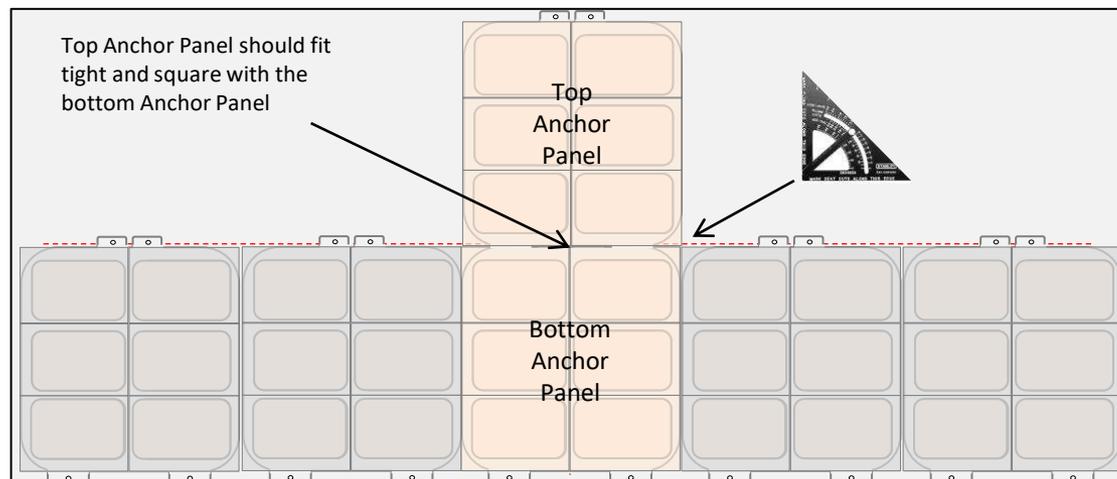

## 5. Install the Row Panels

Once the center Anchor Panel is installed. Mount remaining row panels outward. Justify each panel to be level with the horizontal center line and a snug seam with the adjacent panel.

## 6. Install Second Anchor Panel

Once bottom row is complete, install second row Anchor Panel on top of bottom anchor panel. Assure there is a snug seam at the bottom. Use an Angle Square to assure 90 degrees on both lower corners (adjust as necessary).

## 7. Install Second Row Panels

Once second row Anchor is complete, install second row panels outward. Assure there is a snug seam at the bottom. Use an Angle Square to assure 90 degrees on both lower corners (adjust as necessary).
