

CommunityShare Domains to Whitelist

This document lists the domains used by the CommunityShare platform. If any of the domains are blocked by an email filter or firewall the platform will not behave correctly.

Website

The marketing website for CommunityShare is located at:

- <https://www.communityshare.us>

Email

We send emails out through ***@communityshare.us**.

- Example: support@communityshare.us

The platform sends notifications through notifications@***.communityshare-mail.us**.

- Example: notifications@tucson.communityshare-mail.us

Platform & Server

The platform/client is served from ***.communityshareapp.us**.

- Example: <https://tucson.communityshareapp.us>

The server/API is located at ***.communityshare.cloud**.

- Example: <https://tucson.communityshare.cloud>

Functionality

We fetch images and documents for the client from Filestack, located at:

- <https://cdn.filestackcontent.com>

We fetch some static resources for the client from the Cloudflare CDN, located at:

- <https://cdnjs.cloudflare.com/>

We use the Google Maps API located at:

- <https://maps.googleapis.com/>

We use the Google Fonts API located at:

- <https://fonts.googleapis.com/>

Support

We use Intercom for support, which fetches resources from (and communicates with) ***.intercom.io**.

- Example: <https://widget.intercom.io>

We use FullStory for support, which fetches resources from (and communicates with) ***.fullstory.com**, examples below:

- <https://edge.fullstory.com>
- <https://rs.fullstory.com>
