## HAIR EXTENSION AFTER-CARE

Dear Client,

It is important to give proper care and maintenance to your hair extensions, to ensure you continue to have soft, shiny and healthy hair as long as possible.

Please follow the maintenance guide below.

### BRUSHING

When brushing hair extensions, use a hair extension loop brush. Brush gently in a downward motion beginning at the ends of the hair and then work your way up finishing at the roots. We suggest brushing your hair extensions 2 - 3 times daily

### WASHING

- Always brush the extensions gently before washing to de-tangle.
- You should not shampoo your hair for 72hrs after the extensions are completed, or after any maintenance sessions.
- Use a shampoo and Conditioner that is formulated for dry or damaged hair, this will add moisture to the hair extensions and will keep them looking better for longer.
- Do not scrub hair when shampooing or conditioning, condition and de-tangle the hair from mid-strand to the ends. Avoid the scalp area.
- Do not apply conditioner to the scalp and bond area. Blow dry the hair on a low setting, for best results use an ionic hair dryer.
- It is recommended that you wash your hair once or twice a week.
- Do not use products that contain sulphur, sulphate, silicones or protein, such as dandruff shampoos.

## PRODUCTS

Moisture is the single most important part in maintainign your new hair extensions.

- Use styling products that are ZERO alcohol.
- Always use a heat protectant on your hair when using heat styling tools such as straighteners, curlers, crimper's and hair dryers. Please ensure that your heat protectant does not contain silicone as this itself is damaging.
- Using heat styling tools on hair extensions can dry them out if used on too high a heat, or too often. It is essential to use a heat protectant on the hair to minimise damage. Always use styling tools on a low heat.
- You can use dry shampoo in between washes.
- You may use treatments on your hair extensions to maintain it from mid-strand to the ends.
- We always recommend vitamins and minerals to supplement and strengthen your hair.
- Swimming pool chemicals and sea water weaken keratin bonds and tape extensions. Before swimming, put the hair in a bun or tie up as the pool chemicals may assist the extensions to fall out. After swimming rinse hair immediately and dry the base area.
- It is normal for some hair extensions to slip out shortly after treatment (so don't panic) however if you find large bundles are slipping, contact your extension specialist right away to signal and find the problem.

# Thank You

for your business

We appreciate your business today and look forward to your next appointment.  
Should you have any concerns or issues, do not hesitate to contact us.
