

antipodes

WATER COMPANY LIMITED

WHAT MAKES ANTIPODES DIFFERENT?

Exceptionally Pure - Sourced from the Bay Of Plenty New Zealand where there is almost no commercial or industrial activity and less than one person per kilometre

The source is officially recognised as New Zealand's deepest high quality artesian aquifer

Naturally filtered through dense ignimbrite rock for up to 300 years, so no chemical cleaning, processing or sterilisation is needed

Unique clean and subtle taste - Low in sodium and bicarbonate and high in silica, offering almost imperceptible flavour and a gentle, silky texture on the palate

The only mineral water in the world to be CarboNZero certified - Antipodes leaves absolutely no carbon footprint from its source to any dining table in the world

Sustainable producer - Appointed as a member of the UN Carbon Neutral Network of companies

Most awarded water at the prestigious Berkley Springs International Water Tasting - the world's leading mineral water competition
