SPECIFICATION SHEET

Heavy Duty Reversing Right Angle Drill with Anti-Torque drive for use with the Jaypro Model TW-800M Anti-Torque wall mounted manual winch.

Two speed 120 volt motor has an internal self resetting overload protection. All ball and roller bearing construction. Helical cut, heat treated gears. Durable, glass reinforced nylon handles. Glass filled body insulates heat of the motor from the user allowing for comfortable, continuous raising and lowering of backstop units.

“D” handle with built in trigger switch allows for controlled speed application on the winch. Separate moveable side handle may be used for either right or left hand operators.

Patented Anti-Torque drive attachment guarantees the safety of the operator even if the winch binds or reaches the end of its cable travel. This unique Safety Feature eliminates the danger of the operator being thrown from a ladder or losing control of the drill by transferring all the torque directly into the winch housing itself. This drive attachment will fit only the Jaypro Model TW-800M wall mounted manual winch.

The power and torque of this drill is sufficient to deliver 800 lbs of line pull on the TW-800M Wall Mounted Winch. This line pull is sufficient to operate any ceiling suspended folding backstop to a ceiling height of 28'. Also will work with any Wall mount upward swing backstop.

Includes plastic carrying/storage case.

The drill is warranted for a period of one year.
