A new scientific journal, entitled Annals of Biomedical Studies, has emerged from Apertus Co. that promises to meet important objectives in diverse biomedical fields, such as Microbiology, Immunology, Cell Biology and Genetics Studies, Human Anatomy and Physiology, Metabolic Biochemistry, Statistical Design and Analysis, Pharmacology and Toxicology, Neurodegenerative disease, and Cancer.

An extensive network of experts will collaborate in it, and this will get reviewers and authors from different countries and academic titles to be connected, providing knowledge transfer.

Annals of Biomedical Studies aims to lead the scholarly community through global communication and nurturing innovative ideas and experiments in both fields Medicine and Biology.

It also aims to provide high visibility and the opportunity to promote research, innovation and knowledge sharing among scholarly leaders of higher educational institutions across the globe.

Its core values are capacity building, learning of new insights and innovation.

Its mission is basically to persistently nurture the values to promote the institutional and academic development through quality research contributions.

Its vision is to research and develop in order to promote scientific innovation as well as enhance excellence through research and development

Its objective is the exploration of new research insights for enhancing creativity and innovation.

Thanks to the setting up of Annals of Biomedical Studies new participation bridges will be opened between renowned academic institutions as well as scholars from around the world.

I firmly believe in the importance of knowledge sharing. And so I welcome all academic institutions and research centers for collaboration through this journal.

I belong to its editorial board and, as a specialist in Medieval Arabic Medicine, have no doubt that it will reach a very important position in different areas of science and knowledge.
