

Edinburgh Genetics' Sustainability Goals

Edinburgh Genetics adheres to the principles of sustainable development as a foundation for innovative and successful business activities. Providing solutions for today's needs without negatively affecting the ability of those in the future to meet their own needs is at the core of Edinburgh Genetics' operating principles around sustainability. There are many factors understood to affect sustainable practices including environmental, social, and economic. Edinburgh Genetics strive to balance equally the interests of these factors.

Environmental Management and ISO 14001

Edinburgh Genetics is committed to responsible waste management, most of the production waste is recycled. Even the PPE worn by staff is washable, reducing waste. The amount of waste from the manufacturing process which is recycled is consistently monitored with the intention to increase recycling year on year. Improving resource efficiency concerning packaging is used to minimize the amount of packaging waste associated with the product whilst ensuring the product reaches its' destination safely.

Edinburgh Genetics aim to reduce the CO2 footprint of their products by manufacturing in the United Kingdom. Manufacturing in the United Kingdom reduces airmiles of the products significantly.

Edinburgh Genetics' outlook concerning environmental management aims to increase customer trust, meet legal obligations, improve environmental impact, and remain consistent with meeting environmental obligations.

Edinburgh Genetics plan to obtain the Environmental Management System certificate ISO 14001. The outcome of this will be to enhance environmental performance, fulfil compliance obligations and achieve environmental objectives.

Standards of Social Accountability

Edinburgh Genetics take a localized approach to implementing social accountability initiatives. One of the main goals of the initiative is to sustain gains in community empowerment and transparency around manufacturing. The manufacturing premises provide employment opportunities for those living locally. The employment practices are fair and regulated by UK government. Edinburgh Genetics regularly monitor the standard within the organization and with those that are associated. Transparency around manufacturing is monitored at every stage throughout the supply chain.

Edinburgh Genetics plan to conform to ISO 26000 to further involve and develop the community and to continuously improve labour practices and operating practices. Edinburgh Genetics also plans to join the Global Reporting Initiative.
