SUMMIT TECH PARTNERS

Platform Modernization Services

Technology is forever changing, forever evolving. How do you modernize while still leveraging your tremendous investment in legacy systems? Many companies are jumping into cloud environment – SaaS.

Summit Tech Partners team members have extensive experience ranging from legacy mainframe systems, distributed systems, mid-range systems, desktops, Web 1.0 all the way through todays modern technology environments including Web X.0, big data and analytics. We bring decades of experience to all our engagements leveraging modern processes and technologies to optimize YOUR environment.

How do you keep abreast of these changes while still nurturing your legacy systems? Many companies have outsourced the maintenance and support of legacy systems. This reduces their costs of operations providing necessary investment dollars to invest in building the next generation of systems. The challenge many are confronted with is an aging workforce not fully entrenched in the continued evolution of technology advancements. The domain knowledge of the 20+ year work force is rapidly approaching retirement and will likely be retiring at an increased rate over the ensuing couple of years. Where does the resident knowledge of that workforce reside? How to you capture it and use it moving forward?

We perform platform modernization services in 30-day sprints. Our 30-day sprints bring intensity, a bias for action, and a built-in exit strategy for you.

STP modernization teams bring deep cross industry platform modernization and renewal expertise to guide and accelerate your platform modernization within our agile execution framework.

Baseline evaluations
