Bitdefender

1. Sign into your [Bitdefender Central](#) account. If you don't have an account already, please sign up for one.

Prior to the installation of Bitdefender, please make sure that you have a Bitdefender Antivirus Plus, Bitdefender Internet Security or Bitdefender Total Security subscription in

your Central account so the product you install can retrieve it's validity from your account. If you need help activating your subscription

2. Go to **My Devices**, then click **INSTALL PROTECTION**.

3. In the **Protect your devices** window click **Protect this device** to install Bitdefender on your current PC. Then select device owner from the list.

- To install Bitdefender on another device click **Protect other devices**. Select device owner first. You can choose to **copy to clipboard** the download link or **SEND DOWNLOAD LINK**. Enter the e-mail address of the recipient and click **SEND EMAIL** to send the download link via e-mail.

4. Wait until the download completes, then run the installer. This button will help you locate it in the browser

5. The installation package is first updated, then the setup wizard appears. Downloading the installation files can take a long time, especially over slower internet connections.

6. Select the **language** you want to install the product in.

7. Click **Install** to confirm your preferences and begin the installation. Wait for the installation to complete.

8. Click **Start Device Assessment** to initiate a scan of critical system areas. When the scan is completed, click **Open Bitdefender Interface**.

- If you do not wish to perform the scan, simply click **Skip**.

9. In the Getting started window you can see details about your active subscription. Click **Finish** to access the Bitdefender interface.

Your Bitdefender product is now installed and activated!

Norton

1. Visit <https://norton.com/setup> on a web browser.
