

cVEDA Dataset Version 1.5

Release date: 2021-06-07

DOI: [10.25720/veda-c15k](https://doi.org/10.25720/veda-c15k)

Data can be downloaded via SFTP:

`sftp://cveda.nimhans.ac.in/data/1.5/`

As usual, we also provide an excerpt of the recruitment files maintained by each recruitment centre, which provide reference values for both the date of birth and sex of each subject. These reference values have been re-checked and should be used instead of the values found in Psytools files. The reference date of birth is not published, rather we use it internally to calculate the age in days associated to dates during de-identification. In this release we have added an excerpt of the follow-up recruitment files, which provide information on the type of follow-up (FU1 or FU2) and age at follow-up.

The de-identified excerpts of the recruitment files can be downloaded via SFTP:

`sftp://cveda.nimhans.ac.in/data/1.5/recruitment/`

Errors and caveats

- Some identifiers found in Psytools files are missing from the recruitment file. You may choose to disregard such data as they might disappear from future releases.
- Some participants listed in the recruitment file lack any Psytools data. We might never be able to identify data associated to these participants.
