

BABY QUICK (\$BABYQUICK)

WHITEPAPER - WEB VERSION

The BABYQUICK Whitepaper aims to educate readers on our vision, strategy and roadmap. Below we illustrate in detail our unique redistribution mechanism. It's an engineering achievement unheard of until now in the POLYGON ecosystem. We are happy to be the pioneers and are excited to showcase the new use cases that this will enable. Safemoon was the one to bring awareness around RFI and HODL rewards. BABYQUICK will carry the innovation torch forward. We will share our vision with the world: the first auto-claim QUICK reward mechanism.

BABYQUICK IN A NUTSHELL

BABYQUICK is the next evolution of a yield-generating contract on the Polygon Chain (POLYGON): you get rewarded in QUICK instead of tokens. The token contract employs a static rewards system—15% of every transaction is split in two:

- 7% QUICK is redistributed to holders
- 3% is used to fuel the liquidity pool exchange growth
- 5% Marketing & team wallet

CLASSIC REDISTRIBUTION

This is a concept that was popularized by Safemoon. The mechanism incentivizes token holders to hold in order to earn dividends from the transactions (buys and sells). Redistribution is based on percentage (in the contract), current token balance and number of holders. TL; DR: You receive more tokens automatically.

BABYQUICK REDISTRIBUTION

We created a unique system that auto-claims for every single holder the amount due. We call it the BABYQUICK PROTOCOL.

The way it works for holders: You buy tokens and hold them, every 60 minutes you'll automatically receive QUICK in your wallet. Not a single action is required.

Your BABYQUICK tokens amount is persistent and won't change.

BEHIND THE SCENES:

The contract keeps track in an array of all token holders

- The contract keeps an index into the array for processing
- Every transaction processes a certain number of users, depending on the transaction size (bigger token transfers can process more, since the gas will still be proportionally less than the value of the tokens)
- The token is based on a Dividend-Paying Token Standard, which means all QUICK the contract gains will be split equally proportionally to the token holders.
- When a user is processed, the contract checks how many withdrawable dividends they have, and if it is above the minimum threshold for auto-claims, will either automatically claim those dividends for QUICK, or automatically buy back tokens for them.

This system is fully automated and doesn't add minimal gas fees proportional to value transferred. The number of holders processed through each transaction is dynamic and based on transaction size. Holders will receive dividends from the queue based on their position in the array. It's a fair system, fully automated. Minimum token balance is 200,000 BABYQUICK tokens to receive QUICK distributions.

DEX PUBLIC LISTING

Following the presale, BABYQUICK tokens will become available for purchase on QuickSwap Exchange.

Token Information (provisional)

Network: POLYGON

Ticker: BABYQUICK

Contract address: 0x9a05D1FF699ea187Dc8523E333eD63503f0d82db

Decimals: 18

FAIR LAUNCH

TOTAL SUPPLY : 100,000,000,000

TOKENS FOR QUICKSAWP LISTING : 100,000,000,000 (100%)

Fair Launch Time : 3 August at 6 pm (UTC) as chosen by community

Liquidity Locked: 100%

Security of BABYQUICK

Locked Liquidity Initial liquidity will be locked for a minimum of 12 months to provide holders with peace of mind that the token can always be exchanged. A trusted 3rd party, Dxlock, will operate as the middle man to ensure that all raised liquidity is locked in a secure locker for the full timeframe.
