

Science Vision at Kingsway Primary School

Build skills year on year

Expand vocabulary and make it sticky

We want children to ask questions

We want children to take risks

Have confidence in their enquiries

Have a deep understanding of the world around them

We want lessons that:

Offer practical activities

Excite

Inspire

Ignite curiosity

Science lessons at Kingsway aim to provide positive outcomes for all, through practical lessons that excite, inspire and ignite children's natural curiosity. We strive to offer an environment where children feel safe, confident and eager to question the world around them, take risks and readily form their own scientific enquiries. This is delivered through engaging and stimulating lessons, giving children the confidence to take on practical activities, form their own questions and ideas using key vocabulary. In all, we aim to make children life-long science learners, to enable them to understand and question the world they live in.
