Understanding the body experiment -

In a clear food bag draw a stomach. Get your child to feed the stomach with 2 crackers/ biscuits. Explain that first the stomach moves and churns to break to food down – get your child to crush the cracker with their hands. Then explain that our stomachs have special acids inside to help us digest the food – add a small amount of soda water/ normal water. Encourage your child to continue to crush and churn the stomach. They will notice that the food looks a lot easier to digest after it has been crushed and mixed with stomach acid.
