

Fairview House, Martley Road, Lower Broadheath, WORCESTER, WR2 6QG

**Dwelling type:** Detached house      **Reference number:** 9978-2070-7351-4976-2930  
**Date of assessment:** 13 September 2016      **Type of assessment:** SAP, new dwelling  
**Date of certificate:** 13 September 2016      **Total floor area:** 149 m<sup>2</sup>

### Use this document to:

- Compare current ratings of properties to see which properties are more energy efficient
- Find out how you can save energy and money by installing improvement measures

**Estimated energy costs of dwelling for 3 years:**

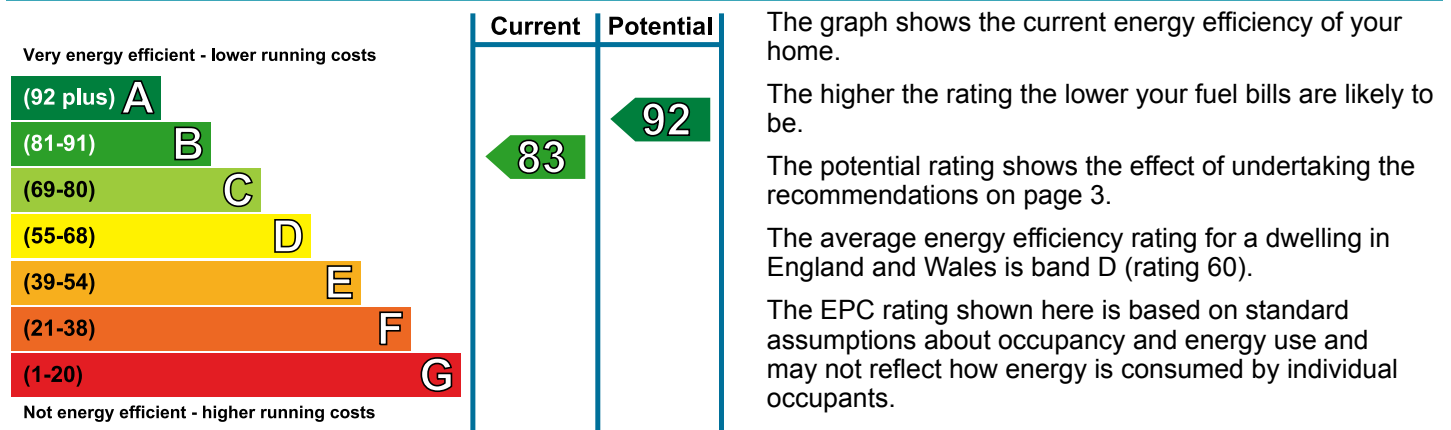

**£ 1,968**

### Estimated energy costs of this home

|               | Current costs        | Potential costs      | Potential future savings |
|---------------|----------------------|----------------------|--------------------------|
| Lighting      | £ 339 over 3 years   | £ 339 over 3 years   | Not applicable           |
| Heating       | £ 1,287 over 3 years | £ 1,287 over 3 years |                          |
| Hot Water     | £ 342 over 3 years   | £ 342 over 3 years   |                          |
| <b>Totals</b> | <b>£ 1,968</b>       | <b>£ 1,968</b>       |                          |

These figures show how much the average household would spend in this property for heating, lighting and hot water and is not based on energy used by individual households. This excludes energy use for running appliances like TVs, computers and cookers, and electricity generated by microgeneration.

### Energy Efficiency Rating

### Actions you can take to save money and make your home more efficient

| Recommended measures                 | Indicative cost  | Typical savings over 3 years |
|--------------------------------------|------------------|------------------------------|
| 1 Solar photovoltaic panels, 2.5 kWp | £9,000 - £14,000 | £ 795                        |
| 2 Wind turbine                       | £1,500 - £4,000  | £ 282                        |

## Summary of this home's energy performance related features

| Element               | Description   | Energy Efficiency |
|-----------------------|---|-------------------|
| Walls                 | Average thermal transmittance 0.25 W/m <sup>2</sup> K             | ★★★★★             |
| Roof                  | Average thermal transmittance 0.14 W/m <sup>2</sup> K             | ★★★★★             |
| Floor                 | Average thermal transmittance 0.20 W/m <sup>2</sup> K             | ★★★★★             |
| Windows               | High performance glazing  | ★★★★★             |
| Main heating          | Boiler and radiators, mains gas                                   | ★★★★☆             |
| Main heating controls | Time and temperature zone control                                 | ★★★★★             |
| Secondary heating     | None  | —                 |
| Hot water             | From main system  | ★★★★★             |
| Lighting              | Low energy lighting in 75% of fixed outlets                       | ★★★★★             |
| Air tightness         | Air permeability 4.8 m <sup>3</sup> /h.m <sup>2</sup> (as tested) | ★★★★☆             |

Thermal transmittance is a measure of the rate of heat loss through a building element; the lower the value the better the energy performance.

Air permeability is a measure of the air tightness of a building; the lower the value the better the air tightness.

Current primary energy use per square metre of floor area: 85 kWh/m<sup>2</sup> per year

## Low and zero carbon energy sources

Low and zero carbon energy sources are sources of energy that release either very little or no carbon dioxide into the atmosphere when they are used. Installing these sources may help reduce energy bills as well as cutting carbon. There are none provided for this home.

## Your home's heat demand

This table shows the energy used for space and water heating by an average household in this property.

### Heat demand

|                              |       |
|------------------------------|-------|
| Space heating (kWh per year) | 6,565 |
| Water heating (kWh per year) | 2,523 |

If you built your own home and, as part of its construction, you installed a renewable heating system, you could receive Renewable Heat Incentive (RHI) payments. The estimated energy required for space and water heating will form the basis of the payments. For more information, search for the domestic RHI on the [www.gov.uk](http://www.gov.uk) website.

## Recommendations

The measures below will improve the energy performance of your dwelling. The performance ratings after improvements listed below are cumulative; that is, they assume the improvements have been installed in the order that they appear in the table. Further information about the recommended measures and other simple actions you could take today to save money is available at [www.gov.uk/energy-grants-calculator](http://www.gov.uk/energy-grants-calculator). Before installing measures, you should make sure you have secured the appropriate permissions, where necessary. Such permissions might include permission from your landlord (if you are a tenant) or approval under Building Regulations for certain types of work.

| Recommended measures               | Indicative cost  | Typical savings per year | Rating after improvement  |
|------------------------------------|------------------|--------------------------|---|
| Solar photovoltaic panels, 2.5 kWp | £9,000 - £14,000 | £ 265                    |  B89 |
| Wind turbine                       | £1,500 - £4,000  | £ 94                     |  A92 |

## About this document and the data in it

This document has been produced following an energy assessment undertaken by a qualified Energy Assessor, accredited by Stroma Accreditation. You can obtain contact details of the Accreditation Scheme at [www.stroma.com](http://www.stroma.com).

A copy of this certificate has been lodged on a national register as a requirement under the Energy Performance of Buildings Regulations 2012 as amended. It will be made available via the online search function at [www.epcregister.com](http://www.epcregister.com). The certificate (including the building address) and other data about the building collected during the energy assessment but not shown on the certificate, for instance heating system data, will be made publicly available at [www.opendatacommunities.org](http://www.opendatacommunities.org).

This certificate and other data about the building may be shared with other bodies (including government departments and enforcement agencies) for research, statistical and enforcement purposes. Any personal data it contains will be processed in accordance with the General Data Protection Regulation and all applicable laws and regulations relating to the processing of personal data and privacy. For further information about this and how data about the property are used, please visit [www.epcregister.com](http://www.epcregister.com). To opt out of having information about your building made publicly available, please visit [www.epcregister.com/optout](http://www.epcregister.com/optout).

**Assessor's accreditation number:** STRO007409  
**Assessor's name:** Mr Richard Britton OCDEA  
**Phone number:** 07771 964 593

There is more information in the guidance document *Energy Performance Certificates for the marketing, sale and let of dwellings* available on the Government website at: [www.gov.uk/government/collections/energy-performance-certificates](http://www.gov.uk/government/collections/energy-performance-certificates). It explains the content and use of this document, advises on how to identify the authenticity of a certificate and how to make a complaint.

## About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions.

The average household causes about 6 tonnes of carbon dioxide every year. Based on this assessment, your home currently produces approximately 2.4 tonnes of carbon dioxide every year. You could reduce emissions by switching to renewable energy sources.

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO<sub>2</sub>) emissions based on standardised assumptions about occupancy and energy use. The higher the rating the less impact it has on the environment.
