Cryptocoin: A Bridge of Digital Currency

www.cryptocoinctc.org

Abstract;- Cryptocoin is a first BEP20 bridge token created with high sensitivity peer to peer electronic cash of its kind , bridging a gap between physical assets, fiat currency with crypto currency and backed by crypto Tokens and Coins already existing on the Blockchain. A bridge token to eliminate the gap between physical assets, fiat currency with crypto currency completely. Now with CTC Tokens everyone can contribute to the future of crypto currencies. The future will be running on cashless transaction with the help of the Blockchain technology, we need the right crypto currency with a strong base to act as the bridge of the crypto currencies eco-system.

1. Introduction:

The future in the world of crypto currencies is here to stay; this is why Cryptocoin has been created to eliminate the gap and be the bridge between the Physical assets with crypto currency.

Now everyone can contribute with CTC tokens you too can contribute to the future of crypto currency by getting yourself the CTC tokens and be part in eliminating the gap of Physical assets, fiat currency with crypto currency completely to create strong bridging of crypto currencies Eco-systems.

Right now the crypto currency community has more of thousands of Coins and Tokens circulating around the Blockchain, but all of them in actual sense are baseless and at risk. This means most crypto Coins and Tokens can lose their value in what's called price inflation, even you the holder without noticing it.

Chapter I

Most of all the Tokens and Coins are created and backed by real world assets (physical assets) and real world currencies (fiat currency). Such crypto tokens and coins are real facing danger in the future because of certain situations which public do not have control of, let's say in case of real world currencies go through what's called rapid inflation of money this means all crypto Tokens and coins backed by real world currencies will lose their value instantly.

Fig.1

Chapter II

Here let's look at something that most of people do not imagine about in physical assets but it can happen in future to come.

If a day comes the public discovers large bulky stones of Gold mines, this means the price of Gold will drop instantly to almost zero price see [Fig.1], causing loss of Value to all crypto Tokens and Coins backed by such an asset.

This is why Cryptocoin has been created to solve such future risks which could led to high volatility of the market.

Definition:

Cryptocoin is a BEP-20 bridge token, bridging a gap between physical assets, fiat currency with crypto currency and backed by crypto Tokens and Coins already existing on the Blockchain.

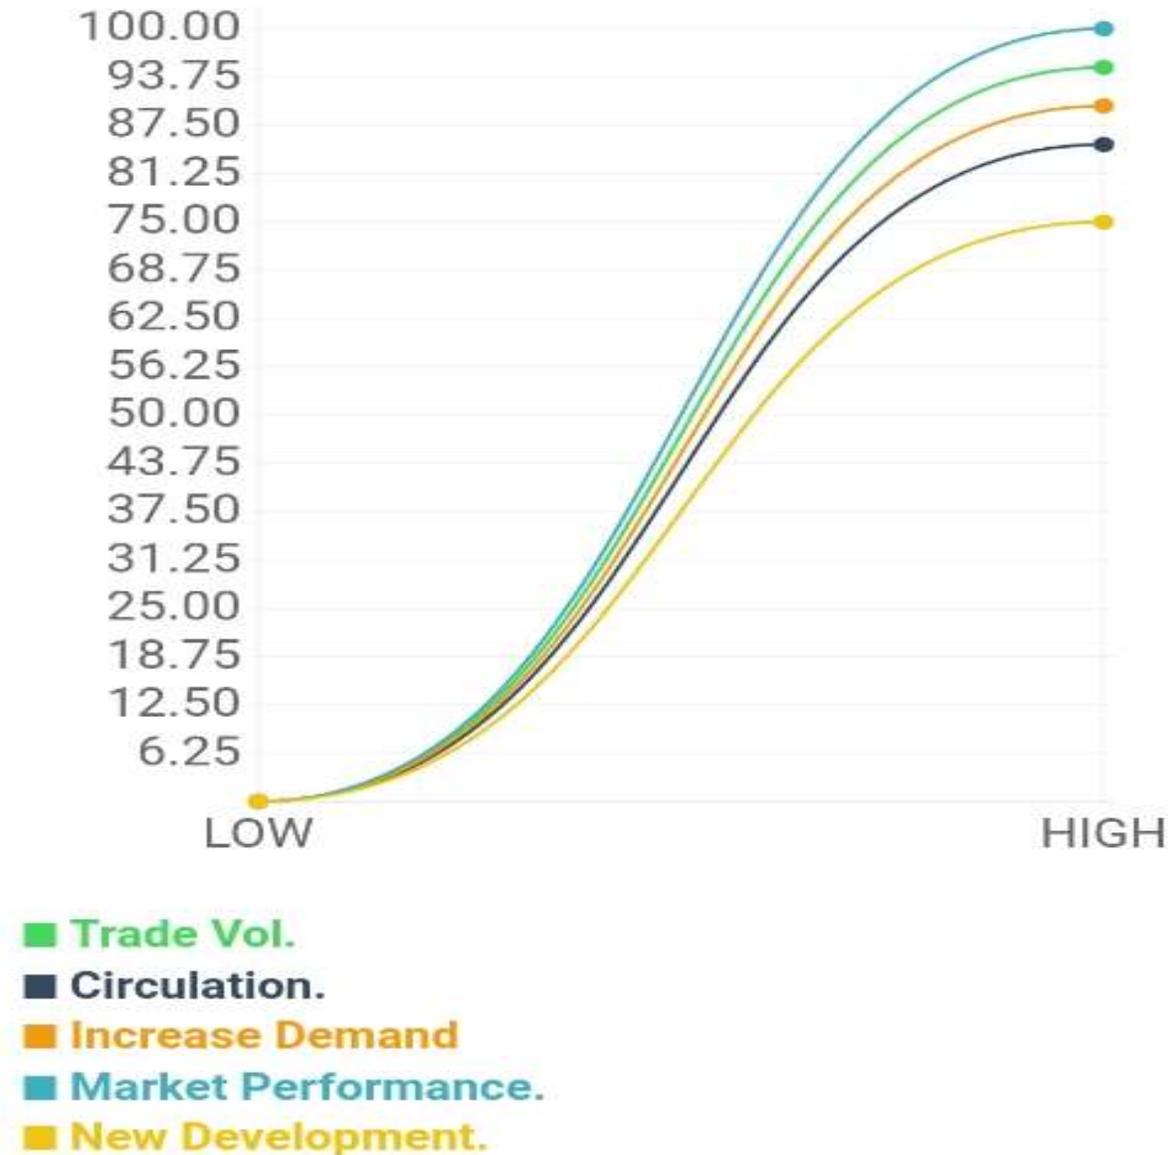

Fig.2

3. Valuation of Cryptocoin "CTC" token.

Cryptocoin price is valued accordingly to the way other crypto Tokens and Coins are performing see [Fig.2];

i. **They Trading Volume:**
> The high the trading volume of tokens and coins markets the more influence on the rise price of Cryptocoin.

ii. **They circulation of tokens and coins:**
> The high circulation of tokens and coins on the Blockchain the less influence on decrease in price of Cryptocoin.

iii. **They increase in demand of tokens and coins:**
> The increasing demand of new minted tokens and coins the higher in the increase on value price of Cryptocoin.

iv. **They market performance of tokens and coins:**
> The steady, stability rise of the crypto market cap of tokens and coins, will cause a smooth move in price of Cryptocoin.

v. **New development in the crypto Blockchain technology:**
> The new innovation and development in the Blockchain Technology will hence bring more confidentiality, attraction and securing of the crypto eco system causing increase in demand of Cryptocoin service which will give the CTC tokens a more store of value.

Distribution of Token

Cryptocoin has been given a Fixed Supply of 77 Million Tokens and no minting of new tokens into circulation.

TOTAL FIXED SUPPLY: 77,000,000 CTC tokens. [Fig.3] they will be a natural distribution flow of the token gathered during the Token Distribution and released back to the Market.
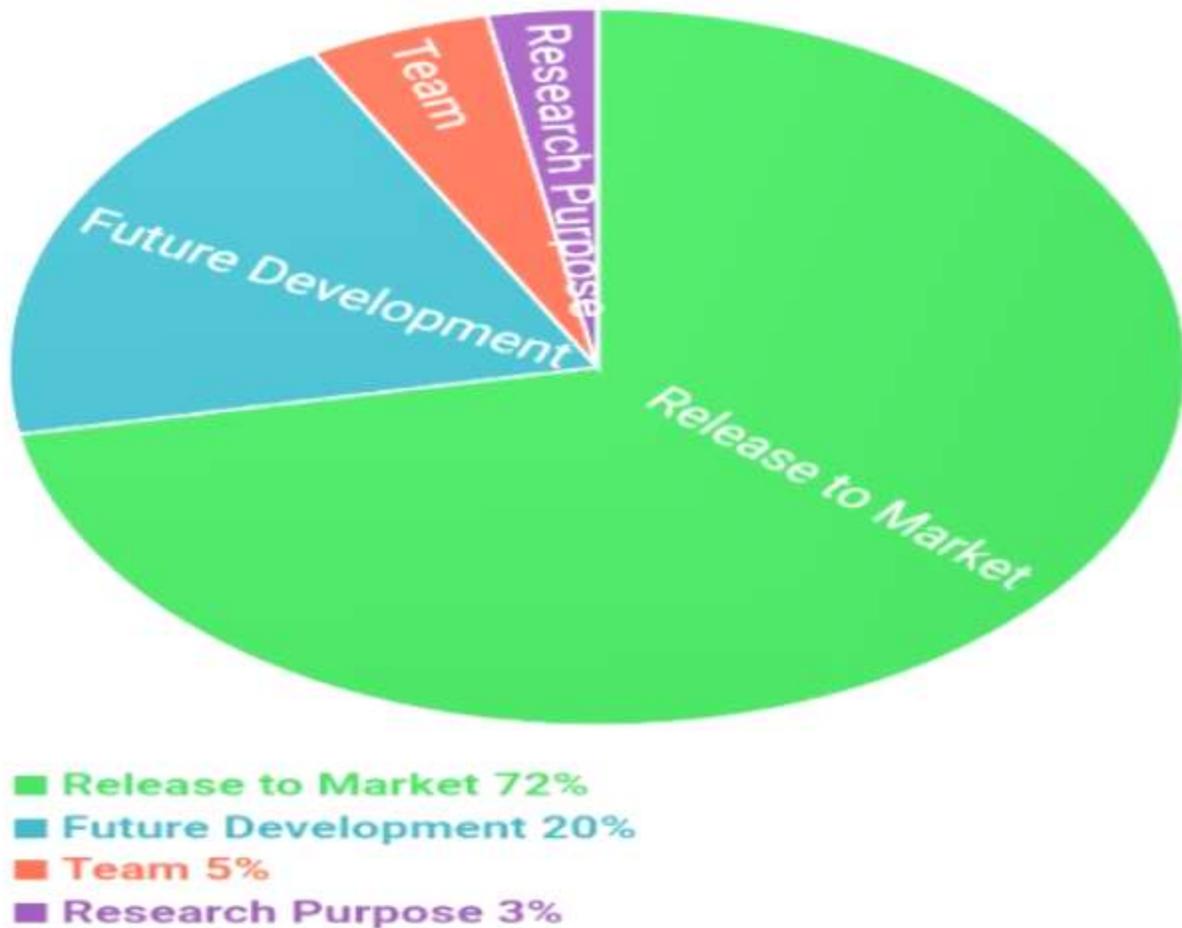

TOKEN DISTRIBUTION

- Release to Market 72%
- Future Development 20%
- Team 5%
- Research Purpose 3%

Fig.3

Distribution of Total Release to Market token Supply.

The distribution of the Release to Market Token Supply will be carried out in Stages which follows;

1.   Reward Program

There will be a reward program carried out inform of a **Airdrop Campaign** where will giveaway CTC Token to only those who will qualify and fulfill the required condition set during the Reward Program respectively.

- 7% of CTC token to be giveaway in Reward Program

- 7% of CTC token of 72% Release to Market supply.

    That is = 5,390,000 CTC tokens

2.   TOKEN SALE

Cryptocoin will have a TOKEN SALE on a selected and given period of time, so that all interested partners and investors can get the CTC Tokens earlier and also for those who would have missed the Reward Program.

- 29% of CTC token will be available for Sale

- 29% of CTC token of 72% Release to Market supply.

    That is = 22,330,000 CTC tokens

Therefore 36% CTC Token will be Locked Up.

- 36% of CTC token of 72% Release to Market supply.

    That is = 27,720,000 CTC tokens

So 36% CTC token will be partially defrosting to the market in accordance, respectively every after 3 years at 3% rate of total tokens Locked this will give Cryptocoin the power it deserve and create usage of CTC token increasing the demand in Future.

<mark>Reminder</mark>: The token defrosting will commence in 2023.

Conclusion

Cryptocoin is first token bridging gap between physical assets, fiat currency with crypto currency, first built on the Binance Smart Chain (BEP-20 Standard).

Cryptocoin is to be the strongest bridge of the crypto Eco-system on Binance Smart Chain Blockchain.

Cryptocoin will grow in its value when more people use the CTC tokens as required making it a Store of Value and people will always have access to their CTC tokens to spend it and pay for goods and invest them anytime. This will not only benefit Cryptocoin itself but also its holders in Future.
