

## SOLUTION OVERVIEW

Implementing best-of-breed applications can lead to multiple disparate systems. When implemented as part of a best of breed strategy, IBM Maximo and Infor SunSystems need to share critical financial data, asset information, business processes controls, and access workflows across the whole organisation. AXON for Maximo and SunSystems solves this issue by providing a fully integrated solution, connecting both applications to provide a seamless flow of information and services throughout the organisation.

### KEY FEATURES

- » Robust integration of transactional and reference data between Maximo and SunSystems
- » Highly extensible to include additional best of breed applications, such as HR and CRM
- » Easily configurable
- » Complete audit trail allows visibility of actual data payloads and transactions
- » Monitoring of activity through statistics, dashboards, and summaries

## INTEGRATE KEY APPLICATIONS

IBM Maximo is considered the world’s leading software application for Enterprise Asset Management and is used extensively in the Energy & Engineering industry.

Infor SunSystems is a leading Financial Management application used by a large number of enterprises across the globe, and can often be found deployed alongside Maximo in many industries.

Computime Software enjoys an extensive track record in successful implementations of both Maximo and SunSystems. We have leveraged this knowledge, together with our experience in providing integration solutions, to develop AXON for IBM Maximo and Infor SunSystems.

## BUSINESS BENEFITS

Out-of-the-box integration with real-time monitoring

Seamless two-way functionality between IBM Maximo and Infor SunSystems business processes

Low cost, highly affordable, fit for purpose, and fully extensible.
