

# LINKS AND WEBSITES

Here are some facts around clicking on unknown links and visiting unknown.

## WHAT RISK IS THERE ON UNKNOWN WEBSITES?

[www.foolproofme.org](http://www.foolproofme.org)

Randomly clicking links or going to unknown websites on your computer, phone, or even smart TV can put you at risk of covertly downloaded software intended to damage or disable your computer or other devices

## WHERE ARE THE LINKS?

Don't click on weird links or even weirder email or Skype messages from your friends or acquaintances. If you receive this stuff from your friend, their account is probably hacked and the link will get you in trouble.

## IS IT JUST CLICKING?

NO!!! If you surf the web to an unsafe place and malware is installed, you may be in trouble. Downloading an app with malware on your computer or smartphone may also lead you to trouble. And this applies to your Smart TV too.

## WHAT DO THEY WANT TO DO?

The programs you download (or are downloaded) are usually set up to monitor all your online activities, and most then share your personal information. This personal information that can be used against you can be financial, general and even medical.

## STOP AND THINK

Think before you click links and visit unknown websites. Take action if you think your friends are at risk.
