MADE FOR TRADING ENTHUSIASTS

OCT  
2020

Coming from an investment background, I have always tried to make the best profits in trading. But those high-frequency traders always stay ahead of me in this game. After spending 80% of my day time, I used to make small profits. Then I started to learn about high-frequency trading (bot trading), but I can tell you 95% of the bots that you see in the market won't help you in the long run; you need a custom-tailored strategy and a bot to win this game.

**Scalping Bots** These are the bots that run 24x7 on high-end servers, and they make small gains on each trade in the markets even when you sleep; that's how all these big guys do it and make millions from the financial markets. **Problem:** According to a survey, 95% of the traders lose their hard-earned money in trading just because of these two factors (greed and emotions). **Solution:** Having a bot helps eliminate greed and emotions from your everyday trading.

After learning how to build custom bots using python and a few other tools, I am doing well for the last ten years in the financial markets. In the previous five years, I have applied the same bots to the crypto markets, and the profits have doubled for me because of the cryptocurrencies being highly volatile. In the starting days of my trading journey, I made two excellent bots, which helped me make an average of 33% annually from the financial markets.

I meet a person called Alex (from Switzerland) in a financial market conference, and we had a coffee and discussed more the markets; he then showed me his trading results, which surprised me.

He made 10x more annual profits than me; then, I asked him the strategy behind his success. He told me he has 100+ trading bots running for him 24x7 virtually, while I was having only two. And when I got back to Malaysia, I started to combine different indicators and strategies like Bollinger bands, RSI, MACD, and a few more. At last, I was able to create 29 bots by combining all those indicators.

My profits have increased 3–4 times than what I was making with those two bots. Every year I try to improve my bot numbers, and just in 2019, I was able to reach more than 100 bots in my whole portfolio of bots (including crypto bots).

I now have a network of bots running on virtual servers trading the top exchanges like [Binance.com](https://www.binance.com), [Huobi.com](https://www.huobi.com), [Coinbase.com](https://www.coinbase.com), [Bitfinex.com](https://www.bitfinex.com), [Bittrex.com](https://www.bittrex.com). A professional team of traders maintains these bots, so I don't always have to trade the markets.

# Birth of YF Synergy...

We have finally decided to launch a network-based cryptocurrency that will help build us more and more bots. It allows investors or traders to invest in our bot network to make hands free profit margins without trading the cryptocurrency markets.

My team and I are coming out with a project called YFSG (yfsynergy.finance) that will help many crypto newbies and intermediate traders hands-free profits from the crypto markets.

With the help of my bots running 24x7, you don't have to worry about the profit or loss, as they will handle everything. Trading the market includes an enormous amount of stress and lack of sleep. It happened to me, too.

You will make a few bucks, but with bots, it's like you are doing it at a more professional level, and you get more profits, well who don't need more profits.

# What is YF Synergy Token?

YF Synergy Token is a subscription-based token. Using YFSG, you can buy subscriptions into different profit-based synergy pools, which offer you a certain percentage of the profit in a month. Every pool is separate and provides a different profit percentage.

For example, XRPBTC — Synergy Pool offers an estimated 5–7% profit in a month for the next two years from the date of investment; you can invest in this pool your YFSG tokens and get anywhere between 5–7% profit for the next two years.

# Synergy Bot Network

Synergy Bot Network consists of more than 100 bots at the moment. Our algorithm decides and selects which coins to trade and which not.

We currently have some popular strategies like the Fibonacci Strategy, Bollinger Bands Strategy, and MFI Strategy already integrated into the bots that help us decide when to exit and when to enter. We have made some custom strategies using a combination of all of the above techniques that allow us to enter and exit much faster before the trend reverses.

Our bots have stop loss and take profits pre-defined, and they take a minimum of 1%+ trading fee or a maximum of 2.5%+ trading fee out of a trend, and if the movement sustains, the bot will continue to scalp it till the trend dries up.

Currently, there are more than 7000 Cryptocurrencies as per the coin market cap, and it's tough to determine which coin will move on the upside so that you can make some gains.

Even if you know if a coin will move on the upside, many people don't know how much it's movement will be. When people see a coin is moving upwards, they will not take profit due to the greed of making more profit out of that coin.

If you want to trade 100 coins at a time, it will be tough to determine which ones will go up so that you can bet on them. It creates market indecisions for your trading style, and you might end up losing your whole capital.

Our bots are programmed to overcome all market indecisions; we use mathematical formulas and concepts to make proper decisions and trade without any emotions and greed. They make smaller trades so that it becomes a decent profit at the end of the day. We have more than 100+ bots in our network now, and we are adding in more and more day by day.

# YFSG Value and Future Growth

Every single DEFI investor dreams of a quick 10x or 100x profit, which is not possible if the project is not sustainable in the long run.

YFSG is a subscription-based token, so it will have a massive demand in the future as there will be continuous recycling of the coin in the market.

Here is a quick break down of the complete recycling process of the YFSG Token.

# RECYCLING OF YFSG TOKEN

A Step by Step Approach

# Synergy Pools

Synergy pools are one of a kind and they are the backbone of the whole YFSG ecosystem.

After we complete our YFSG token sale and launch on uniswap exchange, we will start launching the Synergy Pools.

Initially, there will be ten synergy pools, and we will link each pool to an ERC-20 wallet. We shall consider all YFSG coins received in that specific wallet as an investment towards the pool.

All YFSG coins received will be sold in the market to add up funds in the exchange accounts so that our bots can utilize them in the trading activities. We pay the profit to the same ERC-20 address according to the pool's estimated monthly profit.

# TOKEN SALE AND TOKENOMICS

OCT  
2020

TOTAL SUPPLY = 5000  
YFSG

TOKEN SALE = 3500  
YFSG

PRIVATE SALE = 1000  
YFSG

PRE-SALE = 2500 YFSG

TEAM = 250 YFSG

FOUNDERS = 250 YFSG

LIQUIDITY = 500 YFSG

MARKETING AND  
DEVELOPEMENT = 500  
YFSG

PRIVATE SALE = 1000  
YFSG

DATE = 11TH OCT-13TH  
OCT

1 ETH = 10 YFSG

MIN = 1 ETH

MAX = 2 ETH

PRE-SALE = 2500 YFSG

DATE = 15TH OCT -  
20TH OCT

1 ETH = 5 YFSG

MIN = 0.25 ETH

MAX = 10 ETH

Thank you  
very much
