Enhydris is an open source environmental system for working with hydrological and meteorological time series data.

Prerequisites
1. Debian/Ubuntu.
2. Python with setup tools and pip
3. Database supported by GeoDjango
4. GDAL
5. PIL or Pillow

The “Umwelt und Informationstechnologie Zentrum” UIZ has many years of experience with the setup and installation of Enhydris but as well with the development of custom WebGIS server platform for Hydrometereological Data visualization. For more information or other services, please contact us.
