

Fundamental Investing X Artificial Intelligence

Upside AI looks to marry age old value/ growth investing principles with new age artificial intelligence. We have therefore built machine learning products that can make fundamentally sound investing decisions. Upside AI's algorithm teaches itself (a) what is a good company; and (b) what does the market consider a good company in current market conditions. We then do manual checks on governance and integrity before creating the portfolio.

Upside Top 250 focuses on the top 250 companies in India by market cap and suggests a diversified portfolio of ~10-25 companies.

Top 5 Holdings (51% of portfolio)

Company	Industry	Weight
Solar Inds	Industrials	11.1%
