

Belfair Water District #1

Consumer Confidence Report

2020

Belfair Water District #1 is proud to present the annual report of your drinking water to help you be better informed and is also required to be distributed annually by federal Safe Drinking Water Act (SDWA) and the State of Washington.

Water Use Efficiency

All water districts are required to set measurable water efficiency goals. This means the difference between metered water from source and metered water billed. Belfair Water had a loss for 2020 of 11.3. We are still changing out customer meters and are very prompt on leak repair.

Your Drinking Water Supply

Belfair Water District has four ground water wells, three wells on the south end of the district, and one well on the north end. These wells provide water from deep aquifers (ground water) minimally treated with chlorine, then pumped to five reservoirs around the district and tested as required by Washington Department of Health and U.S. EPA 1-800-426-4791.

News

Covid-19 has been a life changing event for everyone, and the district has been no exception. Early on the district was closed to the public and personnel were put on split shifts for a substantial amount of time as things proceeded this eased and we were able to have full staff and open to the public. We at the district apologize for any inconvenience this caused hope for the return of normalization in the 2021. Though Covid slowed progress for the district there are a few events that took place worth noting. Well 2 at the office location was completely refurbished. Customer water meters continue to be replaced. There were a few leaks that we repaired immediately. The district was able to maintain all well sites. Lastly, the district has actively been seeking potential cross connections and has been having backflow preventers installed when necessary. Belfair water district has also updated the website and upgraded online payment processing. We are no longer with Xpress Billpay and are now with Invoice Cloud.

You can setup autopay, go paperless and view bills online if you go to www.belfairwater.org and click "Pay Online".

Backflow & Cross Connection

Backflow is a key element in any water system. A backflow device can be installed to prevent any contaminates from being allowed back into the drinking water system. Belfair Water District want to ensure that the very last user has the same quality of water as the first user. This is done through the installation of a backflow device. Backflow devices are required if a property has a well, irrigation system, commercial business, and various other reasons. Any questions concerning backflow please call the office and our staff would be glad to help you.

As always, we continue to be committed to the highest quality of drinking water and to always be in good standing with the community and the State of Washington. We will always hold our customers in the highest regards.
