Rubber Design's New Range MP-mounts

General/applications
The Multi Purpose anti-vibration mounts are designed for active isolation of vibrations. They can be used for various applications such as generator sets, pumps, compressors, cabins, containers etc. The internal deflection limiter avoids overload and allows use for mobile applications on trucks and on board of ships. Because of the shape of the mount with the metal top the natural rubber is perfectly protected against oil and ozone.

Features
The key benefits of the Multi Purpose mountings are: easy to calculate and achieve an optimum result, no need for skilled engineers to install them and to conclude the MP mounts are maintenance free. Due to the compact standard range they can be delivered from the shelf. The Multi Purpose mounts can also be delivered on customer’s specification, i.e. with height adjustment, or welding plate. Because of the circular shape the springrates are equal in both horizontal directions. In spite of the small mounting height a reasonable deflection for perfect isolation is guaranteed.

Quality control
The mountings are tested and selected on stiffness before delivery to the customers.
Vertical Load Deflection Characteristics And Dimensions MP Range

MP 2 Mount

MP 3 Mount

Note: S = Static Load limit  M = Marine Load limit

MP 4 Mount

MP 5 Mount

Note: S = Static Load limit  M = Marine Load limit
