

## 6.1 EMPORIA

### HOW DOES IT WORK?

The Vue is the smart home power management solution that installs into your home's electrical panel or plugs into an outlet near your home's electric meter. Vue helps you understand and manage your power consumption and generation through a powerful iOS or Android home energy app. Most importantly, with the Vue expansion module, we monitor your appliances, heating, air conditioning and solar to manage potential problems before they escalate. As a result, you have a more energy efficient home that is protected from costly damage.

## 6.1 EMPORIA FEATURES

- 24/7 generation and real energy monitoring
- Real-time data - anytime, anywhere
- Tracking individual circuits (with packages sensor 50A)
- Net metering for solar generation 3-phase
- option (with 3-phase package) Actionable
- push notifications
