

EFFICIENCY GAS SEPARATOR

Stewart's, Inc.

Efficiency Gas Separator

Stewart's Efficiency Gas Separator is a unique, patented tool specifically designed for gas separation problems in moderate to high GOR rod-pumped wells.

When the Efficiency Gas Separator is installed in a rod-pumped well that produces hydrocarbons composed of a moderate to high gas liquid-ratio, the following results can be obtained:

- Better pump efficiency leading to better oil and gas production
 - Reduced gas pounding, which leads to premature pump failure
 - Reduced chemical usage
 - Reduced formation back pressure
 - Improved bottom line
-
