

Dura-Chem, Inc.

*Modern Technology; Traditional Service
Since 1978*

MAJOR PRODUCT LINES

Plating Chemistry
Anodizing Chemistry
Powder Coating Chemistry
Cleaners & Degreasers
Rust Prevention
Lubricants & Coolants
Hydraulic Fluids
Paint Stripper
Fluid Handling Systems
Degreasing Equipment

LAB SERVICES

Custom Lab Analysis
For All Chemical Types

SPECIALTY PRODUCTS

Drawing Compounds
Black Oxide Salts
Zinc Die Cast Cleaners
Heatbath Chemicals
Chromate Conversion
Lincoln Chemicals

ACCESSORIES

Tanks\Baskets
Filters
Spin Dryers
Plating Barrels
Heaters – Controls

CLEANING EQUIPMENT

Dip Tanks
Hand Parts Washers
Ultra-Sonic Units
Spray Cabinets
Custom Tanks

POWDER COATING PRODUCTS

Iron Phosphate C.C. 40L

C.C. 40L is a liquid phosphate designed to be used in a high-pressure washer and steam-cleaner application. This is a very concentrated product designed for a non-recirculating system. Best used on steel or other ferrous metals.

Iron Phosphate C.C. 50L

C.C. 50L is a liquid iron phosphate designed for use in any spray application from manual to automated in a recirculating tank. Product will provide excellent cleaning and coating with minimal maintenance.

Iron Phosphate C.C. 92L

C.C. 92L is a liquid iron phosphate designed for use in an automatic-spray application. Product will provide excellent cleaning and coating with minimal maintenance.

Iron Phosphate C.C. 97

C.C. 97 is a powder iron phosphate designed for use by spray applications. Product will provide excellent cleaning and coating with minimal maintenance.

Iron Phosphate C.C. 155MU

C.C. 155MU is a unique 3 part system for use in any iron phosphate system when long term recycling is employed. Product will provide excellent cleaning and coating when combined with Replenisher 1 and Replenisher PHD. Very low maintenance. Designed for low temp bath.

Zinc Phosphates

These products are designed to provide a uniform microcrystalline zinc phosphate structure. This product line is capable of meeting the most stringent corrosion-resistance requirements and provide a fine-grain coating on ferrous and nonferrous metals, when used in conjunction with our specialized grain refiner.

Final Seals & Rinses

We have a full line of final seals and rinses to accommodate and compliment any conversion-coating process. Whether you are using an iron phosphate or other inorganic-conversion coating, we have a sealer to enhance paint adhesion and increase corrosion resistance (salt spray results). Our sealers are used to eliminate flash rust. We carry a variety of sealers and rinses including alkaline blends, amine blends, solubilized metal blends, and polymer blends.
