

Evolution Digital's Device Manager (eDM) SaaS Wi-Fi management application enables subscribers to manage their home networks and Wi-Fi devices, reducing and eliminating truck rolls and customer calls to the operator. Within eDM Wi-Fi mobile application, available on iOS® and Android Mobile™, end users may:

- Easily self-install Wi-Fi devices and set-up the home network, including mesh pairing, using QR codes and/or MAC address on the device's label.
- Monitor the mesh network topology for network status, connected client devices and their RSSI signal strengths.
- Manage network name (SSID) and password for the network.
- Easily create and manage separate Internet access for guests (enable and disable guest access SSID/password).
- Control Wi-Fi devices in the home via power cycle (reboot) and factory reset to default settings.
- Create and manage Internet schedules for children via parental controls. Connected devices may also be temporarily or permanently blocked from using the home network.
- Run speed tests, check upload/download speeds, manage Wi-Fi device ECO LED settings, find technical support and FAQ.

KEY FEATURES

Generic

- CWMP (TR-069)
- APIs available for operator integration
- Guided self network set-up, Wi-Fi device install and mesh pairing
- Available in English, Japanese, Korean, Portuguese, Spanish and Vietnamese
- Requires iOS 11.0 or later
- Requires Android 5.0 and up

Management

- SSID/password and security provisioning
- Home network topology and signal strengths, IP addresses, MAC addresses
- Managing best Wi-Fi channels
- Parental controls and Internet schedules
- Guest access network creation and enabling/disabling
- Manage LED settings

Diagnostics

- CPU / memory usage by device
- Upload / download speeds by Wi-Fi device
- Speed tests (Ookla)
- View connected, paused and blocked devices and their signal strengths
- Connection status
