

PUMA

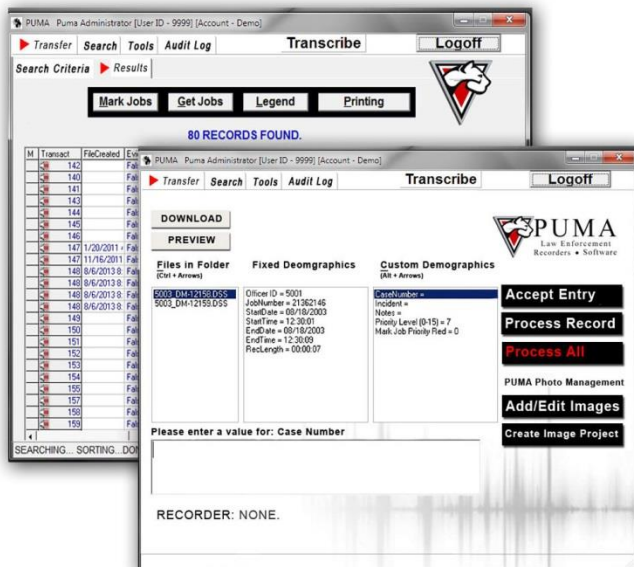

PUMA Management Software

Digital Audio Management

As digital recorders become a valuable tool for Police Officers, departments are now looking for a better way to manage the voice recordings. PUMA Management Software is the most complete file management system available for storage, retrieval and management of digital audio recordings for law enforcement.

Secure, Searchable, Simple

PUMA Audio Manager (DAM) is a powerful, secure, and easy to use digital audio management software designed for Law Enforcement agencies. Key to the success of PUMA is its ability to provide officers an easy platform to download their digital voice recordings, add file information such as case number or incident number if needed and store the audio recording securely. With various search options, a recording can be easily retrieved for playback or copied to a CD.

Reviewing Cases

You need to get all the interviews relating to a particular case. You log onto the PUMA File Management System and search by case number and all recording, interviews, or field recordings, regardless of who recorded them are there for you to review or burn them to a CD/DVD for further distribution and storage.

The Right Solution for Law Enforcement

The PUMA Management Software is the right solution for Law Enforcement agencies that want to securely and efficiently manage their digital evidence in an easy and intuitive fashion.

Digital Evidence Management Solution

Building the Case for PUMA Digital Audio Manager

PUMA is designed to upload the officer's digital voice files as quickly as possible with minimal involvement by the Officer. Audio files are easily transferred to the PUMA Voice File Management System via a USB connection at a PC workstation. An Officer can add Custom demographics, such as Case Number or Incident Number, providing important information about the recording that can be used later when searching for these files. The officers transfer screen can be customized for each department to better fit their needs.

Handling Complaints

PUMA provides desktop voice file management capabilities from any PC in the department which provides officers, detectives and others better access to recordings as well as improved efficiency in accessing information. When handling a complaint you can log into the PUMA Management System at your PC, enter the officer's ID and the date referred to in the complaint and soon you will be listening to the civilian contact at your desk. You save time and money and your officer stays out of court.

File and System Security

With departments having different access/security concerns, PUMA has designed flexible security levels and access rights that can be assigned to individual users or groups. PUMA also includes technical security measures to prevent unauthorized access to data such as, file and password encryption (256 bit), secure data transfer using FTP protocol and file and directory protection.

Integrated Transcription

Another productivity enhancing feature of the system is PUMA Transcribe, which supplies your record department with an integrated solution for transcription.

Features:

- Copy audio files to CD/DVD for distribution
- Accepts the DSS and WMA file formats
- Simplified interface for ease-of-use
- Custom demographics for department's unique needs
- Multiple search options for access data
- Internal messaging system
- Flexible security levels and access rights
- Detailed audit trail and file encryption with 256-bit AES encryption
- Built-in transcription support
- Password protected
