Course Fee: \$75

Certification: 3 Years

PDHs: 3.0

Iowa Certified Construction Site Pollution Prevention Inspectors and Installers *eTraining*

Course ID: ICCSPPI-02

The ICCSPPI eTraining provides the same content as the live training event but made more convenient for you to complete on demand and at your own pace. The certification is designed for professionals conducting 7 calendar day inspections of construction sites and city staff conducting quarterly inspections. The course is dually intended for installers of pollution prevention practices for erosion and sediment control.

Participants will revisit General Permit No. 2 implementation, and learn about various modes of sediment control and erosion control for all seasons. Course instructors will also cover dewatering, quality control, how to estimate SWPPP quantities, and updated SUDAS guidance.

The eTraining course features over 2.5 hours of on-demand video content, learning checks, and interactive exercises. Several handouts are available to download as well.

RECERTIFICATION PROCESS

Complete the ICCSPPI eTraining program and sign the Code of Ethics to become certified. Those that are certified are recognized statewide for their credentials to conduct pollution prevention inspections at construction sites. There are no continuing education requirements but recertification is required every 3 years. Your name and contact information will be updated in the Certified ICCSPPI database located at www.iowaStormwater.org.

WHY GET CERTIFIED?

Anyone conducting construction site inspections in Iowa needs to be "qualified" according to the Iowa Department of Natural Resources. The ICCSPPI eTraining program gives individuals the information they need to be capable enough and knowledgeable enough to perform the required functions of permit compliance.

This training program is developed by the Iowa Stormwater Education Partnership and supported by partner cities and professional members.
