

National Pipe & Plastics has been producing polyvinyl chloride (PVC) pipe for residential, agricultural, commercial, municipal and export markets since 1970. National is one of the largest PVC pipe producers in North America. National has two manufacturing facilities, Greensboro, North Carolina and Vestal, New York. National is a full line pipe producer producing plumbing pipe, electrical conduit, and water and sewer products. The sizes range from ½" to 24" diameter pipe.

National Pipe & Plastics' products include:

- Gravity Sewer Pipe
- Drain, Waste, Vent Plumbing and Industrial Pipe
- Electrical Conduit
- Utility Duct used by electric utilities
- Pressure Water Pipe used for water distribution, irrigation and golf courses
- Other products include PVC Duct, sold to telephone companies, and Sewer and Drain Pipe, used for water drainage

Through marketing and product diversification, National Pipe & Plastics has achieved significant market penetration and steady growth amid a sometimes volatile economy. National Pipe & Plastics' seasoned management is dedicated to the strategy on which the company's success was built: The production of a variety of quality products for a diverse group of markets within the well-defined geographic area of New England and the Northeast, Mid-Atlantic and Southeastern states.

The addition of new products and increased capacity strengthens National Pipe & Plastics' leadership position in its regional markets. The plastics pipe market is expected to grow with the continuing acceptance of PVC especially as new applications are discovered. PVC's durability and ease of installation make it a natural replacement for deteriorating metal pipe.

In the coming years, management will remain committed to cost containment, hands-on leadership and high capacity utilization that have been the foundation of National Pipe & Plastics' success.
