

# KEY CONTAINER CORP CUSTOM & MILLER BOX MOUNT TOM BOX

AUGUST 2020

*A Family Business with Cutting Edge Technology*

## THE LIFE STORY OF A BOX

Trees are cut into logs and then into woodchips.

The woodchips are boiled at a paper mill where the pulp is extracted, dried and flattened into paper.

The paper is glued together to produce corrugated board to create boxes used to carry goods.

Boxes are then recycled and sent back to the paper mills to be broken down into pulp again

New recycled packaging is made after the corrugated board has been cleaned to get rid of glue, staples, ink, and more

## INTERESTING & FUN FACT ABOUT BOXES

Musee Du Cartonnage et de Imprimerie located in France is a museum dedicated entirely to corrugated packaging
