MENSURATION AND GIRL DROP OUT IN INDIA - AN ANALYTICAL ANALYSIS

Dr. Meenakshi Lohani
Assistant Professor, Department of Geog Km. Mayawati Government Girls P.G. Cc Badarpur, Gautambuddha Nagar, Uttar Pradesh, India

Abstract
The Research paper is primarily analyzing the Problem of Educational Dropout of Indian school going Girls at the Adolescent period which is the dependent variable of the study. The Independent variable of the Study is the Menstruation Cycle; a natural process as a part of every girl. 

In her study the researcher is analyzing and discussing the impact of Menstrual Girls Dropout rate in India.

The study is categorically classed into eight sections of Analysis. The first three sections are specifically discussing the study with meanings and definition of independent and dependent variables of the study i.e., Educational Dropout and menstrual status of girls. 

The fourth section of the study explains the cause and effect relationship between menstruation and rate of educational dropouts of girls.

The fifth section is discussing the major determinants or factors that act as a root for dropout due to menstruation of girls. This includes the Personal, Family, Social and Cultural factors.

The sixth and seventh section updates the reader about the Governmental policies and initiatives taken to provide education to girls during menstruation.
