

The Physician's Digital Assistant

Improve EHR performance, accuracy, and efficiency by harnessing the power of Artificial Intelligence, medical dictation, and EHR integration.

Noteswift researched what numerous studies, articles, and publications are telling us about physician burnout, EHR frustrations, and patient satisfaction.

88% of physicians report feeling moderately to severely stressed and burned out on an average work day.

2015 VITAL

Physician burnout is a significant problem at 83% of healthcare organizations, according to a 2018 survey published in the *New England Journal of Medicine Catalyst*.

Over 64% of clinic visits involve extra EHR entry work outside of office hours.

2015 VITAL

Primary care physicians are spending **5.9 hours each workday on EHR data entry.**

2015 VITAL

Over 60% of physicians report that **“more self-directed time”** and **“more ancillary support for paperwork and charting”** are the top two ways organizations can help them reduce stress and burnout.

2016 Advisory Board

The 2018 Biennial Survey of America's Physicians from the Physicians Foundation revealed that **good patient relationships** are the greatest source of job satisfaction for 79% of physicians.

Samantha from Noteswift can improve the quality of your time and care with patients by automating your EHR entry using powerful artificial intelligence and machine learning. **Learn more at www.noteswift.com.**
