

Introducing a better way to protect and share sensitive and privileged information. WindTalker enables non-disruptive information sharing for users inside and outside your organization.

ESSENTIAL INFORMATION SECURITY FOR ATTORNEYS AND CLIENTS

Role-based permissions secure privileged data for the lifecycle of your documents

SET YOUR DATA FREE

Failure to adequately secure sensitive data can lead to disastrous results for law firms and their clients. WindTalker is designed specifically to help you avoid inadvertent data disclosure, or an intentional leak.

Legal professionals are constantly faced with the need to collaborate both internally and externally while protecting sensitive and privileged data; two obligations that often present competing security requirements . . . until now.

WindTalker's data-centric approach enables differential document sharing, the ability to assign multiple permission roles within a single document. Based on the specific permission, a recipient may be able to view some or all the sensitive information identified within a document. In addition, permissions control editing, printing, and other document permissions.

And WindTalker's role-based permissions remain with the document throughout its lifecycle eliminating the need to prepare, distribute, and manage multiple versions of a single document.

CLICK WindTalker is ready made for legal professionals and clients with convenient ribbon add-ins for Microsoft Word and Adobe Acrobat. Sensitive data can be manually selected or auto-identified for protection in accordance with your specific use cases.

PROTECT Differential protection, the ability to assign role-based access to sensitive data, protects your documents more securely while allowing the ability to modify access, revoke or expand file access privileges, and provide tracking for the lifecycle of each document.

SHARE Changing the way you think about document sharing, WindTalker puts you in control with absolute confidence that unauthorized data disclosure will be prevented. A complete audit trail and document sharing history lives with the document for its lifecycle providing permanent evidence of the protections you implemented.
