

About HB Healthcare Safety®

HB Healthcare Safety® is a Social Benefit Corporation actively pursuing an end to all pain & suffering caused by failures in healthcare delivery. We believe that no one, from patients and families to the healthcare teams, should ever suffer or die as the result of process of care or system failures.

HB Healthcare Safety®

About the HBHS Collaborative

The HB Healthcare Safety® Collaborative is a growing group of American, Canadian, and Australian medical systems moving beyond mortality review to defining, measuring and improving the process of care and system failures that prevent providers from doing their best job every day and allow harm to be caused to our patients and providers.

EXPERIENCE

The Collaborative experience is a process of wisdom. We go beyond data to understanding the lessons learned within patient charts striving toward meaningful change and excellence in care. HBHS Collaborative members have committed to discovering the omissions of care – the things we don't do – that contribute to the majority of harm caused. It is the fault of hospital systems and processes that allow healthcare providers to cause unintentional harm while delivering care.

NO ONE SHOULD EVER SUFFER OR DIE AS
THE RESULT OF PROCESS OR SYSTEM
FAILURES IN CARE DELIVERY.

PURPOSE

The purpose of the Collaborative is to provide a community of support within and between medical systems and individuals throughout this process of change. Findings can be shared across and between institutions worldwide through our Healthcare Safeware® technology and monthly webinars. Members further have the opportunity to participate in collaborative academic research publications to inspire those outside of the Collaborative.
