New Product Release

FOOD GRADE LIFT & SEAL™ CONTAINER DUMPER

Unit discharges containers of food product into an existing hopper at 72" above floor level. Unit features heavy wall, tubular carbon steel construction with continuous welds. Unit includes a 304-2B stainless steel pour hood with continuous TIG welds, polished smooth. Pour hood discharge outlet includes an air actuated butterfly valve with a nylon 11 coated disc and a food grade EPDM seat.

System includes an electrically driven gearmotor coupled with a variable frequency drive, configured with the MTS exclusive two-speed circuit for a quiet, smooth, and controlled rotation.

Carbon steel structural components finished with an FDA Coropoxy Polyamide paint finish, designed for use in Food and Beverage processing facilities.

Units are custom designed for your requirements with discharge heights to 40', for any size or weight container. For more information, visit our showroom at www.materialtransfer.com or call us at (269) 673-2125.
