Radiant Ceiling System

Warm Like The Sun

Step from the shade to the sun on a cool day you experience how Radiant Heat warms our world. You feel the radiant rays immediately. Also, if you take a rock and set it in the sun, it will absorb that warmth and then in turn help warm the space around it.

A ThermaRay Radiant Heating System accomplishes exactly that same effect. The radiant rays travel in straight lines and warm all the objects in the space.

The radiant rays warm the walls, floor, ceiling, windows, furniture, cabinets and essentially everything in the room becomes part of the heating system. This absorbed thermal energy helps keep operating costs low, but most importantly the radiant rays warm "You".

The Architects Choice

- **Energy Efficient**
- **Maintenance Free**
- **Safe** - No open flames, high surface temps or risk of carbon monoxide poisoning
- **Healthy** - No blowing dust, allergens or airborne contaminants
- **Zoning** - Precisely controlled in each room
- **Superior Comfort**
- **Affordable**
- **Aesthetic** - Completely concealed for more decorating freedom
- **Invisible** - Completely concealed behind any ceiling material - sheetrock, wood, steel, etc.
- **Quiet** - No moving parts, fans or pumps

Installation Diagram

Heating Panels are installed between the joists and above the vapor barrier and ceiling. Can be installed above 1 or 2 layers of 5/8" sheetrock, tongue & grooved wood, steel, etc.

UL #3AA3
