

KNiTO is NotionWave's individual based product which can be used to purchase and access digital contents.

KNiTO comes in two editions:

- **KNiTO Enterprise** is a web based portal, that offers access to your digital contents, using an industry standard browsers.
- **KNiTO Handheld** is an application which runs on Tablets and Smart Phones and allows access to your digital contents in a very user friendly manner. It supports both Apple iOS and Android.

KNiTO has the following features:

State of the Art: These products are developed using Liferay6, which is the most highly recommended JAVA based software development platform. It provides flexibility and reliability.

Any Time Anywhere: With our products you can work no matter where you are and when it is.

Search Engines: We support Web Scale Discoveries of Summon from Serials Solutions and EDS from EBSCO, as well as Federated Search engine from Muse Global. These advance search products bring you the most accurate, and quickest results possible.

Advanced Browsing: A uniform and integrated subject classification for all content types enriched with industry standard ranking features including Impact Factor, H-Index, and Best Book.

Security: A highly secure authentication process that works with every publisher and content provider. We offer high end encryption and authentication through NotionWave's programmed and secured proxy, Athens, and Muse Global.

Single Sign On: Once you have successfully logged into KNiTO, you are good to access all your resources.

Link: Our Link technology allows you to access publisher content without any problems, or middle portals.

Research Management Tools: We support advanced research management tools such as End note, Ref Works, Mendeley, which will help you to cite and write faster than ever.
