Danger

Helios is a unique system because of the helium-strong type B star at its center. It creates fierce solar winds that can interfere with ship sensors. The UEE military takes advantage of this phenomenon to shield their exact activities at Hephaestus Station and Helios IV. Recently, the beautiful, oceanic planet of Tangaroa (Helios II) has become a popular tourist destination.

Known Jump Points		Special Activity Est. Levels		System Composition		General Safety Rating and Location Info			
Charon	Reounced recognition of UEE	M	Black Market	Illegal biological experiments		Helios I	Terrestrial Rocky	A barren, coreless world whose proximity to the sun makes its limited resources difficult to access.	!
Goss	Visually stunning system	M	Import	Regular consumers of luxury goods		Tangaroa	Ocean Planet	Frequent volcanic activity on this large ocean world results in the creation of temporary land masses that are often used as brief recreational sites by visiting watersport enthusiasts. The planet's more permanent residents traditionally live in underwater habitats near the sparse landmasses located at the poles.	×
Taranis	Unclaimed and dangerous	M	Tourism	Volatile archipelago of creation and reclamation		Helios 2a	Planetary Moon	A solitary moon with a dense nickel/iron core.	×
Tyrol	Binary star going nova	S	Lore	Exotic subsea housing		Helios III	Gas Giant	A large hydrogen-rich gas giant.	×
				System discovered by Daybreak Mauraders		Helios IV	Ice Planet	Helios IV has been completely reserved for military use by the UEE and houses numerous bases and classified facilities.	×
				South pole run by military R&D	Hephaestus Station	Space Station	A restricted access military station in orbit around Helios II that is frequently used by the Navy for training exercises.	×	
				Undersea hotel planned by Tyler Newman
