

Chorus Analyser

Empowers Analysts to work more effectively

Courtroom-ready reports in minutes

Chorus Analyser is the sector-leading analytics software from Chorus Intelligence.

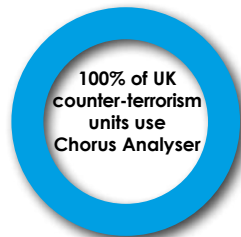

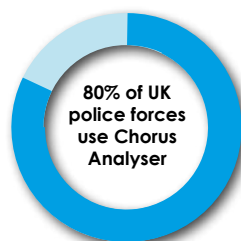

It enables you to create courtroom-standard briefing documents from the most complex data in minutes.

By so doing, it helps Analysts work more effectively, highlighting previously hidden connections and opening up new lines of enquiry, putting actionable intelligence in the hands of Investigators *fast*.

Designed for the police by the police

Chorus Analyser has been developed by working in collaboration with our clients and is designed to integrate seamlessly with third party tools, including data acquisition applications and mapping software.

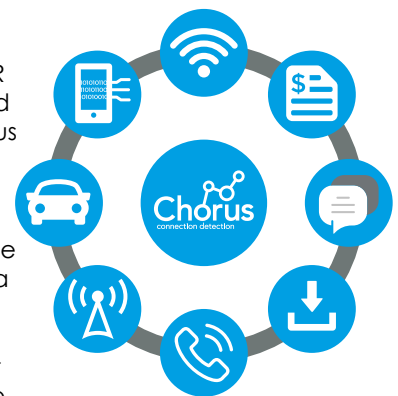

Its function and outputs evolve continually; we listen to the people who use Chorus and develop it accordingly.

Analyse *all* your data

Chorus Analyser has the ability to ingest all forms of digital data. From communications and ANPR data, to RF survey data and handset downloads, Chorus Analyser can cleanse and format them all.

Chorus Analyser also has the ability to overlay each data type in one customisable dashboard to help you spot links and find out what happened around the time of an offence.

Chorus does three things and it does them brilliantly:

Data Cleansing

Chorus Analyser can cleanse up to 10 million rows of data quickly and efficiently. The single application handles *all* data, for example:

- > Call data
- > Handset downloads
- > Financial records
- > Number plate recognition
- > RF survey data

It saves costs by eliminating time spent cleansing and formatting.

Connection Detection

Chorus Analyser can uncover links *within* and *between* cases. Using a simple desktop tool, it enables Analysts to view the output data as:

- > Heat maps
- > Cluster maps
- > Network diagrams
- > Geo maps

Report Generation

Chorus Analyser enables analysts to produce reports in minutes rather than days.

- > Courtroom-ready reports
- > Actionable intelligence
- > Full and robust audit trail

Chorus Analyser has a built in cell site analysis module that is included in your licence fee.

A customisable dashboard gives a high-level perspective, identifying connections that merit further investigation.

Typical return on investment: under 40 days

Business cases developed by UK police forces consistently show a triple financial payback.

Chorus increases staff productivity, reduces waste and allows better use of operational resources.

Investigators are able to achieve higher detection, enforcement and conviction rates.

Average full recovery of costs takes less than 40 days - a positive payback that makes financial sense in any operational budget.

In collaboration with  **PoliceICT**

Chorus is now available to all forces via the Police ICT Company, streamlining the procurement process and giving law enforcement easier access to vital technology.
