Blackboard Login and Course Access

Blackboard is an online course management system (CMS) that is used to deliver content and facilitate learning. The CMS is compatible on both PC (personal computer) and Apple platforms and can be accessed from most browsers – i.e. Firefox, Chrome, Safari, etc. (Notice: There have been instances when Internet Explorer has been quirky, therefore the suggested browsers are highly recommended). Blackboard can also be accessed from mobile devices such as: iphones, ipads, androids and tablets, however mobile devices should not be used to engage in any interactive activity where assignment submission or taking online test taking is required (Notice: Be aware that wifi is very susceptible to interruptions therefore users are not advised to take online exams using wifi technology). To Access and log into Blackboard see steps below:

1. Using the browser of your choice enter the url http://blackboard.liu.edu into the address window.

2. When the login page appears enter your login account information and click the “Login” button.
3. Upon logging into Blackboard the user will enter into the MY LIU institution page. This page displays modules that enable the user to access their course(s), announcements and tools as well as provide links to various resources. The **MY Courses** module displays a list of the courses a user is registered for. The user can click on the course title link that appears in the **MY Courses** module to go into a course.
4. There is also a **Course List** module that appears in the **Courses** tab. This module displays a list of courses that the user is registered in as well; however the course information is more extensive. The user can also enter into a course by clicking on the course title link from the **Course List** module.

5. Upon clicking on the course title link the user will enter into the **Home Page** of the course.
