

Summer STREAM
Challenge #5: Egg-Larva-Pupa-Adult

While walking the farm today, Ms. Kristin and I saw this living, crawling, creature on the ground.

For Elementary, Middle and High School Students:

Step 1: Please watch the film (Film 3) of our little green friend.

Step 2: Answer the following questions in your journal:

What is it?

How big is it?

Do you see the quarter on the ground?

What colors do you see?

Is it related to any of the living creatures seen in challenges 2 or 3?

Step 3: Draw a picture of the caterpillar in your journal.

Information: The life cycle of butterflies and moths involves four (4) stages: the egg, the larva (caterpillar), the pupa (chrysalis or cocoon) and the adult. In the caterpillar stage the caterpillar grows rapidly

What did you see today?
