

Many of us have family members, friends or colleagues who are going through the greatest battle of their lives, and every minute saved in development could add valuable years, decades or even lifetimes to many. As a valued partner, you can count on Catalyst to have a sense of urgency when it comes to your oncology programs.

### A CRO Built for Oncology

With a personal passion to help find a cure and a cultural tenet to be exceptional in one area versus mediocre in many, we have expanded our biometric and clinical operations offerings to include a full service, end-to-end solution. We did this by hiring exceptional leadership and talent with vast experience conducting complex oncology trials. We did this by investing in innovative technologies that help support oncology development programs. We did this by building valuable relationships with sites and third-party providers with the same focus. And we can do this because we actively listen to understand your needs before devising a targeted solution.

And with access to Catalyst's robust, global network of veteran oncology clinical monitors, we can assure 100% therapeutic and geographic alignment. Where else have you received that promise?

*My experience with Catalyst was first-rate, and I would work with them again.*

*Oncology diagnostics firm*

**Our oncology experience encompasses both solid tumors and hematological malignancies, crossing numerous indications and tumor types.**

Catalyst has extensive experience in all phases of oncology clinical research, with a specialty in early phase. The combination of staff and company experience has yielded impressive results to date.

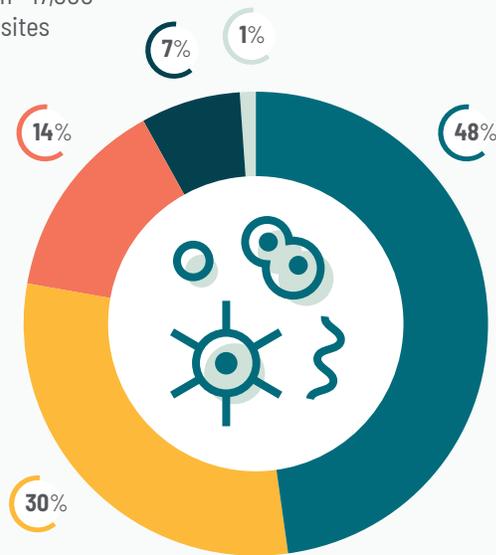

### Staff & Corporate Oncology Experience

More than 200 studies in ~17,000 patients among ~2,700 sites

Studies conducted across US, Europe & APAC

Solid Tumors 50%  
Liquid Tumors 50%

- Pre-clinical
- Phase I
- Phase II
- Phase III
- Phase IV

### Oncology Indications

- |              |                     |
|--------------|---------------------|
| ALL          | MDS                 |
| AML          | Melanoma            |
| Anti-emetics | Merkle cell         |
| Basal cell   | Mesothelioma        |
| Bladder      | MM                  |
| Breast       | MPN                 |
| Cervical     | Myelofibrosis       |
| CLL          | NHL                 |
| CMML         | NSCLC               |
| Colorectal   | Oral Mucositis      |
| Endometrial  | Ovarian             |
| GI           | Pancreatic          |
| Glioblastoma | Prostate            |
| Head & Neck  | Renal               |
| HPV          | SCLC                |
| Leukemias    | Soft tissue sarcoma |
| Lymphomas    | Thyroid             |
| Mantle cell  |                     |

### Benefits of Partnering with Catalyst

- Singular focus and expertise in oncology
- Every study tailored to customer & program (one size does not fit all)
- Straightforward, collaborative & transparent
- Your program is our priority
- Executive oversight on every program
- Our people understand oncology trials and their inherent complexities
- Clinical teams are individually tailored to each study with all oncology CRA veterans
- A People First culture ensuring responsiveness and team continuity

If you are planning a first in clinic study or later phase, consider Catalyst as your partner, because there is no time to waste in selecting the wrong CRO.
