Challenges & Opportunities

Commercial Properties, Inc. came to GreenLight Solutions to learn how they can reduce their energy footprint, improve their operational efficiency, adopt renewable energy technology, and become more water-wise. CPI was investing in their own internal sustainability in their office space and operations, and they recruited GreenLight to conduct initial research and provide ideas on how to get started.

Recommended Solutions

The GreenLight project team conducted extensive research to compile a list of recommendations for CPI to become more energy efficient. This research included best practices in office energy efficiency, advanced methods of insulation, available incentives and rebates, cool roofing technology, various LED lighting systems, occupancy sensors, HVAC and more. The project team compiled the best ideas into a presentation for CPI to use for decision making. The team also conducted research and recommendations into water efficiency and the business case for sustainability.

Project Benefits

BENEFITS TO PROJECT PARTNER

Commercial Properties, Inc. was able to use the recommendations provided to make important decisions for how their organization will invest in their energy efficiency and operational sustainability.

BENEFITS TO SOLUTIONEERS

The project team was able to complete educational research and learn how to put together a report of recommendations. They learned best practices for energy efficiency and water use.

BENEFITS TO THE COMMUNITY

The community benefits indirectly from an organization like Commercial Properties, Inc. investing in their eco-efficiency and minimizing their environmental footprint.
