

Public Service Announcement

Staying in compliance w/our Wastewater Discharge Permit, the State of Louisiana wants the public to understand the dangers of mercury in the environment. While it's common knowledge that mercury is harmful to humans and our ecosystem, industry has been replacing it with safer alternatives and has made great strides in limiting its use. However, it is still used in various items like batteries, fluorescent lighting, etc.....

Please access the link below to gain additional information regarding reducing your exposure to this harmful element.
